

LSA Verification & Data Lineage Integration

Stateless Modular Flutter Architecture • Strict Fail-Closed Security Pipeline • Behavioral UI Friction Telemetry

Role & Candidate

Applicant: Flutter Mobile App Developer Candidate • Position: Digivir

Fail-Closed Security Architecture

Guarantees that missing lineage or ambiguous server states (HTTP 500, status: null) immediately halt execution and isolate data into quarantine.

Stateless Modular Byt Hierarchy

Pure presentation components driven by native `ListenableBuilder` with zero `setState()` calls.

// Technical Stack & Framework Metrics

- Framework : Flutter 3.x (Dart 3.x)
- State Mgmt: `ChangeNotifier` + `ListenableBuilder`
- Security : SHA-256 + RFC 4122 UUID v4
- Lineage : `predecessor_id` Pre-flight Gate
- Telemetry : Autonomous >5.0s Friction Monitor
- Backend : Node.js/Express Mock Service (Port 3000)
- Test Suite: 15/15 Flutter Tests Passed (100%)
